

The B Series boiler economizer is comprised of 14 standard models and is designed primarily for boilers with round stacks. The standard stack connections can be altered to easily fit 10" - 34" in diameter alleviating the cost of stack adapters. The units come standard with either 4 or 6 fpi spacings for operating with No. 2 fuel oil and/or natural gas depending on the efficiency of the combustion. With its lightweight design and exclusive AI-fuse heat transfer surface, installation is fast and costs are kept to a minimum.

**Mounting Flanges for Bolting to Mating Flanges or Adapters**

**Stainless Steel Internal Bypass**

**Hinged Stainless Steel Access Door Panels**

**Quick Release Tension Latches**
